

SQL Instructions

Files Provided:

1. **County Lookup** (CSV file)
2. **Agent Lookup** (CSV file)
3. **Biochar Sales** (CSV file)

Requirements:

1. Database Setup:

- **Create the following tables** in one of the following RDBMS (MySQL or PostgreSQL):
 - **county_lookup**
 - **agent_lookup**
 - **biochar_sales**
- **Import the provided CSV files** into these tables.
- **Proof of tables created and data imported** will earn you **50 points**.

2. Write a Query:

- After creating and importing the tables, write an SQL query to produce a single table that includes the following details:
 - **Number of biochar bags sold per agent** (*5 points*)
 - **Total revenue expected per agent** (*5 points*)
 - **Total revenue received per agent** (*5 points*)
 - **Remaining balance per agent** (*5 points*)
- **All data should be categorized by county and arranged in descending order** based on the number of biochar bags sold (*10 points*).
- **Show subtotals per county** and also the **final grand total** (*20 points*).

What to Submit via Email:

- Send the following to brianotieno@plantvillage.ke:
 - Screenshots showing proof of the tables created and data imported.
 - Screenshot of the query that returns the table output.
 - Screenshot of the table result.

Example of a single table result

Result Grid  Filter Rows: Export:  Wrap Cell Content: 						
	county	agent	b_qty	b_rev_expected	b_rev_received	rem_balance
