

Tree-based classification methods – Lesson overview

Previously, we explored the application of **tree-based models**, such as decision trees and random forests, in **addressing regression challenges**. These models are also applicable when it comes to **solving classification problems**.

In this lesson, we **refresh our understanding** of how decision trees and random forests work. We also look at their relevance and application in **classification contexts** and how we can implement them using sklearn to solve classification problems.

Multiple choice questions

Learning objectives

- Recall the terms and the process used for training decision trees.
- Compare the decision tree training process in regression and classification settings.
- Build and evaluate tree-based models for classification.
