

FiS Milestone #7 Worksheet

Step 1: The Future of Work

Please copy and paste your response from the [Future of Work Activity](#) into the box below.

In this activity, you:

1. Identified your niche and researched the latest trends in your field.
2. Wrote a short paragraph summarizing the key points you found in your research.
3. Searched and registered for an online event related to the future of work on Eventbrite or LinkedIn.

Step 1a: Paste the summary of your article/blog here:

Summary on Machine Learning and AI Trends in Kenya

The Kenyan AI and Machine Learning landscape is rapidly evolving, with significant advancements and applications across various sectors. The integration of AI technologies is not only increasing efficiency but also enhancing customer experiences and risk assessments in industries like insurance

In cybersecurity, AI is becoming a pivotal tool for threat detection and incident response, with Kenya reporting a significant rise in cyber threats

Google's AI Cyber Defense Initiative is contributing to this advancement by investing in AI-ready infrastructure and innovative tools for defenders

The use of Retrieval-Augmented Generation (RAG) is set to make substantial changes in AI, combining retrieval and generation to improve the quality and relevance of responses in language generation tasks

RAG models are enhancing Large Language Models (LLMs) by providing up-to-date information and reducing misinformation

This technology is expected to be pivotal in shaping a more efficient and intelligent

future

Google AI Studio is a browser-based IDE that allows for rapid prototyping with generative models, offering various interfaces for prompts and the ability to tune model behavior

Google has also introduced Gemini, its largest and most capable AI model, empowering developers to build with state-of-the-art open models

Langchain is integrating Google Generative AI models, providing safety settings for Gemini models and enabling developers to create context-aware GenAI applications

Google Cloud is also integrating generative AI with its databases, with AlloyDB AI designed for GenAI workloads and compatible with PostgreSQL

Step 1b: Paste the link to the online event here:

<https://gdg.community.dev/events/details/google-gdg-nairobi-presents-build-with-ai-series-ii-gemini-x-angular-2024-04-04/>

Step 2: Mapping Your Network

Locate your [Updated Personal Career Workbook](#) from [this activity](#).

Cross-check and ensure you have **added at least 4 people you know in your network who can help you with your job search**. *For example, your friend who works in HR can review your resume, or your uncle, a manager, can introduce you to his colleagues.* We also provided an example in the worksheet.

Name	Surname	Who Are They to Me?	Category of the connection?	Level of Connection?	How Can They Help Me?	What is the Best Way to Contact Them?	Will I reach out to them this week?	Status (Reached out or not)	Comments
Alex	Bernard	Old friend from college	Fellow Alumni	▼ Middle Circle	▼ Recommend 5 organizations I can apply to in the cybersecurity space	Email and/or Facebook	Yes	▼ Message Sent	▼ Lots of great memories together in uni

Next, paste the link below. Make sure the document is viewable by anyone with the link.

 Personal Career Workbook

Step 3: Review This Cover Letter

Next, please copy and paste the paragraph from [this Activity](#) where you reviewed this cover letter.

Dear Sir/Madam,

Hello! Please find my resume attached in response to the Management Associate position posted on your website. As you probably saw, I'm Brandon. Why did I sign up for this position? Well, I'm going to cut to the chase here: I think I'm born to be a Management Associate after reading the requirements in your advertisement.

To give you a snapshot of who I am: I'm relaxed, I'm friendly, and I'm SUPERB at working with people! In fact, my friends often tell me I'm "a people person"! LOL. But there are a few things the resume doesn't show, and I think they are very important for you to know as well.

I have the drive to excel in this position and I put 110% effort into all that I do. I am skilled at project management, marketing, and working under intense deadlines. I work great in a team and I am comfortable working independently as well. My FYP supervisor had commended me on my research skills too. I have outstanding organisational skills and am dynamically trained in Microsoft Office programmes. My professionally-relevant hobbies include photography and web development. I have lived in various countries and it gives me a unique perspective that I bring to my work. It also may be of interest to you that I was the Hall King of XYZ Hall in 2019 — yup, I'm a looker!

In short, if you are looking to have a smart, creative, good-looking, and detail-oriented genius in your team, I am your guy.

I would love to share with you how my skills and ideas can benefit your company in an interview with yourself or the director.

Thanks for your consideration; I look forward to hearing from you soon!

Sincerely,
Brandon

P.S. I only apply to companys that I'm highly interested in.

Ensure that your paragraphs clearly state if the cover letter is good or bad and provide your reasons for your answer.

Step 3: Review This Cover Letter

Reviewing this cover letter, there are several positive aspects to it. The writer, Brandon, brings a casual and personal tone to the letter, which can be refreshing and stand out in a sea of more formal applications. His confidence shines through, especially when he asserts his qualifications and passion for the position. He expresses his personality, enthusiasm, and some specific skills, which can help the reader get a sense of who he is

beyond his resume.

However, there are also areas where this cover letter could be improved. First, the tone, while personable, may come across as too casual for many professional environments. Phrases like "I'm a looker!" and the postscript can be perceived as unprofessional. The comment about being "good-looking" is irrelevant to his job qualifications and could be seen as inappropriate. Additionally, the letter lacks specific examples of achievements; while Brandon mentions his skills and previous roles, he does not quantify his successes or provide concrete instances where he demonstrated his abilities.

Moreover, the humor and colloquialisms (e.g., "LOL," "I'm your guy") risk not resonating with all hiring managers and might detract from the seriousness of his candidacy. While it's essential to stand out, it's also critical to maintain a level of professionalism that matches the company's culture.

In terms of structure, the cover letter could be more focused and targeted. It should open with a clear statement about the position he's applying for, and then move into how his specific experiences make him an ideal candidate. Brandon should also research the company and incorporate why he's interested in this particular company, beyond the role itself.

The closing statement is well-done, inviting the reader to discuss further how Brandon can contribute to the company. This call to action is an excellent way to finish a cover letter.

Step 4: Cover Letter

Paste the cover letter you wrote for the job you found on LinkedIn in [this activity](#).

Make sure your cover letter should be no more than one page and should include the following:

An introduction that explains why you are interested in the job and the company.

- A brief overview of your relevant experience and skills.
- An explanation of why you would be a good fit for the job and the company.
- A closing statement that thanks the employer for considering your application.

Step 4: Cover Letter

Head of Human Resources,
Dalberg.

Dear Hiring Manager,

I am thrilled to apply for the Data Scientist position at Dalberg, as advertised. With a solid foundation in statistical analysis, machine learning, and a proven track record in data-driven problem solving, I am eager to bring my expertise to Dalberg's innovative team.

Dalberg's commitment to democratizing AI access and fostering digital inclusivity across Low- and Middle-Income Countries resonates deeply with me. Having spent over two years harnessing data to address complex issues, from public health to climate change, I am passionate about using my skills to contribute to impactful projects that ensure no community is left behind.

My experience includes designing algorithms, building scalable data pipelines, and employing machine learning tools to extract actionable insights from vast datasets. I am proficient in Python, SQL, and front-end development technologies, enabling me to deliver comprehensive data solutions from backend to user interface. Moreover, my ability to communicate complex data findings effectively makes me well-suited to collaborate with diverse teams and stakeholders at Dalberg.

I am excited about the opportunity to join Dalberg Data Insights, where I can continue to grow professionally while contributing to meaningful projects that drive sustainable change. I look forward to the possibility of discussing how my background, skills, and enthusiasm can support and enhance Dalberg's ambitious goals.

Thank you for considering my application. I am keen to contribute to your team's success and to further Dalberg's mission of building a more inclusive and sustainable world.

Warmest regards,
Moses Yebei.
